

Minutes of Meeting: Approval Portal Application Development

14th April 2026 @ Arts-BUFC Department

The meeting was conducted to discuss development of a Portal Application/Website for Prepress workflow and approval purposes. Following key points were discussed on agenda and concluded:

- We have decided to go ahead with developing **Portal Web Link** initially, as it will be easier-to-use and more feasible to bring users onboard than a portal mobile app.
- For **access and registration**, all concerned users (i.e. customer poc, sales rep, prepress arts & development team) will register/login using work emails. OTP verification is not necessary for daily logins but can be incorporated for registration.
- All key actions taking place on portal will be **automatically notified** on the registered emails such as task has been submitted, approved, proceeded for bulk etc.
- **Basic Workflow:** once customer will generate order (repeat, amendment, or new), sales will get notified and create required DRF/MRF on SAP, which will automatically appear as job task on prepress portal, where it will further get assigned to design/development team.
- **Feedback & Approvals:** once task is completed and uploaded on portal, the customer will be able to review file and add feedback notes in case of any required changes, or an approved seal in case of no changes. It is to note here that we do not share any editable or print-ready file with our customers. Customer can only view the files on portal and add annotations; no permission should be granted to download any kind of data from portal.
- Costing department's data will also be a part of DRF making.
- This portal will be linked to our SAP data, where DRFs/MRFs are created.

For further clarity, please refer to workflow excel sheet and meeting recording.

Kindly share a tentative timeline for this project, and feel free to reach out if you need any further assistance with this project.
